# infinitesima

# **Senior Applications Engineer**

Semiconductor devices provide the foundations on which progress in the technology sector are enabled. From Smartphones to Artificial Intelligence, 5G communications to autonomous vehicles, all are made possible through advances in semiconductor processes. Scaling these processes requires subnanometer measurement of increasingly complex 3D structures to enable more powerful devices. At **Infinitesima** we have pioneered a revolutionary atomic precision 3D metrology technology which has been qualified by leading companies in the semiconductor industry and we believe is essential for continued progress. To quote Lord Kelvin, *'If you can't measure it you can't improve it!'*. Come and join our dynamic team to enable the semiconductors for tomorrow's technological developments.

Do you have experience in probe microscopy or semiconductor metrology control, we currently have an exciting opportunity for a Senior Application Engineer to join our applications team,

Location: Korea Reporting to: Worldwide Applications Director

## The Opportunity:

The Applications Engineer position is a key role and technical contributor within the company. The primary focus of this role will be to support customers in the application of Infinitesima products, solving problems and developing methods to demonstrate the capability of our technology at its best. To liaise with customers, understand their needs and ensure they are addressed. It will require close working with industry experts to understand their current and future requirements.

Experience of probe microscopy is a must, preferably in an environment where problem solving can be demonstrated. Additionally, experience of the semiconductor manufacturing environment is highly desirable.

#### Key Responsibilities:

- Be the primary customer contact for applications of Infinitesima products
- Support the customer in data collection and method development by understanding their applications and optimising the system and recipe parameters
- Drive applications projects to meet customer requirements
- Present the product and associated results to customers in a professional way
- Trouble shoot application performance to diagnose system operation and set-up issues
- Support business development, through running samples, presenting data, writing reports, conference presentations and other means

## Personal Qualities:

- Capable to work in multi-functional teams, communicating ideas, and solving problems
- Fluent in written and oral technical English, excellent presentation skills, and able to communicate complex concepts
- Ability to travel globally

### Education / Qualifications:

Master's degree in physical sciences, Engineering discipline or equivalent

### Professional Skills/ Abilities:

#### Essential

• Extensive experience in probe microscopy (AFM)

Desirable

- Extensive experience in the Semiconductor industry, ideally in the metrology area
- Proven project management experience
- Operation and use of industrial Metrology equipment.
- Sales support experience, ideally working with analytical instrumentation
- Experience in managing characterisation and demonstration of metrology equipment
- Experience in communicating and supporting customers

All qualified applicants will receive consideration for employment without regard to race, colour, religion, sex, sexual orientation, gender identity, national origin, or disability.
